Unique technology solutions for maximizing business success

Murex Technologies

Achieving success in today's ultra-competitive business environment requires strategic resource management with a keen eye on efficiency and productivity. To reach your financial goals, your technology solutions must empower you to truly understand your current performance, manage your resources effectively and efficiently, and optimize execution at every level.

A smart investment for long-term

At Murex Technologies, we understand the strategic importance of your technology investments. That's why we design and deliver comprehensive yet cost-effective business intelligence solutions that can help your organization achieve its goals quickly and efficiently. From initial consulting and strategic planning through application development and deployment, we are 100% committed to helping your business perform. For more than a decade, we've been successfully delivering fully integrated technology solutions to businesses across a wide range of industries.

Strategic Solutions Tailored to Fit

When you partner with Murex Technologies, your success is testament to our value as a solutions provider—whether those solutions are modified from existing software or designed specifically to meet your particular objectives and business environment. Our tailored solutions enable you to gauge your performance, identify and overcome your weaknesses, and exceed your goals.

ENTERPRISE PERFORMANCE MANAGEMENT

We can tailor the SAP BusinessObjects Planning and Consolidation application to your unique business needs, allowing you to streamline your planning process, ensure adherence to financial reporting regulations, and determine the best route to reaching your business goals. Dovetailing our extensive business expertise with SAP's proven technology ensures a measurable return for your organization that continues long after our work is done.

ENTERPRISE RESOURCE PLANNING

Having appropriate ERP systems in place—integrating human resources, payroll, financials, supply chain, and other "back-end" components—is crucial to improving overall efficiency. With the right system in place, tailored to your operational demands, your organization can reduce overhead, provide better service, and report results faster and more accurately than you ever thought possible.

CUSTOM APPLICATIONS

Sometimes existing software simply doesn't suit your needs. With Murex Technologies, you don't need to shape your business around someone else's solutions. By gaining an in-depth knowledge of your organization, we can align our solutions with your unique processes, strategies, and specifications to drive measurable results.

In a sea of competition, Murex Technologies stands out from the rest. The mollusk known as a murex was prized by ancient Greeks and Romans for the striking purple dye it yielded. This dye was used to color regal robes, distinguishing royalty from commoners. With deep knowledge and expertise in both the technology and finance arenas, our team can design and deliver e-business solutions that reach beyond simple analytic tools to get at the heart of what your business needs to truly thrive.

performance

Superior Service for Sustained Performance

In order to consistently manage your company's performance, your strategic goals need to be aligned with planning, budgeting, and forecasting metrics. Our top-down methodology begins with an assessment of your business needs and doesn't end until your users are completely comfortable and the software solutions we've provided are fully integrated into your existing systems—with as little disruption as possible.

THE MUREX TECHNOLOGIES METHODOLOGY

ANALYZE: For every engagement, large or small, we consult thoroughly with you to determine your specific needs, identifying potential risks and inefficiencies, and then devise a solution based on those factors.

DESIGN: We then flesh out the initial concept, including all technology needs, and work with your team leaders to outline precisely how your solution will unfold in light of current operations.

BUILD: After the design is finalized, our team builds the solution, including assembly of hardware, software, and custom coding.

TRAINING AND STAFFING RESOURCES

Our skilled consultants are at the ready with broad software training capabilities and at-your-service staffing solutions. We're known for giving honest opinions, being supportive and accessible, and offering strategic operational solutions backed by top-notch training and service.

TRAINING
Our experienced instructors are ready to partner with your organization through every phase of your technical education with a hands-on training platform that facilitates your team's understanding of the new system. Course offerings are broken into three categories:
» Concepts and methods
» Software packages
» Application development environments and languages

ANALYZE > **DESIGN** > **BUILD** > **TEST** > **IMPLEMENT** > **SUPPORT**

TEST: Unit tests, including a component review for functionality, are followed by a system trial to ensure function of all parts in cohesion as well as the impact of the new system on existing systems.

IMPLEMENT: When the new system is fully functional, our proven implementation strategies enable a smooth transition in the shortest time frame coupled with thorough training for end users in order to optimize the capabilities of the system.

SUPPORT: We offer short- and long-term support for all of our technology solutions. Having the builder solve the problems saves you both time and money.

STAFFING
With our contingent of qualified and experienced IT professionals, Murex Technologies can provide expert staff to augment your existing IT team. We are experts in matching our staff to yours, giving you the advantage of passionate team members who are as committed to your success as they are to their own. Our consultants offer specific skills for a specific project for a specific time frame, and we can even be on the job the next day.

Why choose Murex Technologies?

» **Our approach.** We view collaboration, communication, and trust as critical to achieving success. We'll work with you to understand your current situation and ultimate goals and then recommend tailored solutions to quickly and effectively bridge that gap. We provide our services in a proactive and positive manner, with honesty, integrity, and mutual respect.

» **Our methodology.** We can help you measure, achieve, maintain, and surpass your performance goals using high-powered technology solutions backed by our one-of-a-kind methodology. From designing and installing custom software applications to integrating and modifying existing EPM and ERP programs, our team is flexible and adaptable—able to quickly address the needs of our clients in a host of business sectors.

» **Our solutions.** Our innovative solutions are always designed and delivered with your needs in mind. We specialize in EPM and ERP technologies, and we've fine-tuned our workforce and methodologies to excel in these areas, offering fast, efficient access to premier functional and technical consultants.

» **Our service.** Murex Technologies was founded with the core belief that service is paramount to our success in the technology consulting field. We consider ourselves a partner, not a vendor, and our customers always come first. We maintain a solid focus at all times on user needs, and we back our solutions with superior training and outstanding service. When you need us, we're there for you—day or night.

About Murex Technologies

Founded in 1997, Murex Technologies has grown to become a premier technology consulting firm, offering strategic support through the creation and implementation of custom business software for business intelligence, ERP, and EPM solutions. We also offer customized installation, deployment, and training of the SAP BusinessObjects Planning and Consolidation application as well as short- and long-term staffing services.

When performance means everything, rely on the company that can truly perform for you.
